PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Aggregate drainage fill.
B. Vapor barrier.
C. Sand cushion.
D. Field quality control.

1.02 RELATED SECTIONS

A. Preparation of sub grade under slabs is specified in Section 31 00 00 - Earthwork.
B. Drainage and filter aggregates for subsurface drainage systems are specified in Section 33 46 00 - Subdrainage.
C. Vapor barrier dampproofing is specified in Section 07 26 00 - Vapor Retarders.

1.03 MEASUREMENT AND PAYMENT

A. General: Measurement and payment for aggregate drainage fill and sand cushion will be either by the lump-sum method or by the unit-price method as determined by the listing of the bid item for aggregate drainage fill and sand cushion indicated in the Bid Schedule of the Bid Form.

B. Lump sum: If the Bid Schedule indicates a lump sum for aggregate drainage fill and sand Cushion, the lump sum method of measurement and payment will be in accordance with Section 01 20 00 – Price and Payment Procedures, Article 1.03.

C. Unit Price:

1. If the Bid Schedule indicates a unit price for aggregate drainage fill and sand cushion, the unit price method of measurement and payment will be as follows:

   a. Measurement: Aggregate drainage fill and sand cushion, including placement and compaction will be measured for payment by the cubic yard, and quantities will be computed, based on the neat lines or pay lines, section profiles, and dimensions indicated on the Contract Drawings.

   b. Payment: Aggregate drainage fill and sand cushion will be paid for at the indicated Contract unit prices for the computed quantities as determined by the measurement method specified in Article 1.03.C.1.

1.05 SUBMITTALS

A. General: Refer to Section 01 33 00 - Submittal Procedures, and Section 01 33 23 - Shop Drawings, Product Data, and Samples, for submittal requirements and procedures.

B. Samples: Submit a 10-pound cloth bag of clean and graded aggregates proposed for the aggregate drainage fill for approval.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Aggregate Drainage Fill:

1. Aggregate drainage fill for capillary break under concrete slabs shall consist of broken stone, crushed or uncrushed gravel, clean quarry waste, or a combination thereof, free from adobe, vegetable matter, loam, volcanic tuff, and other deleterious substances. It shall be of such quality that the absorption of water in a saturated surface dry condition does not exceed 3 percent of the oven dry weight of the samples.

2. Aggregate drainage fill shall be of such size that the percentage composition by dry weight as determined by laboratory sieves (U.S. Series) will conform to the following grading when measured in accordance with ASTM C136:

<table>
<thead>
<tr>
<th>Sieve Size</th>
<th>Percentage Passing Sieves</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-1/2 inches</td>
<td>100</td>
</tr>
<tr>
<td>1 inch</td>
<td>90-100</td>
</tr>
<tr>
<td>No. 4</td>
<td>0-5</td>
</tr>
</tbody>
</table>
3. Percentage wear when tested in accordance with ASTM C131 and ASTM C535 shall be 50 percent maximum.

B. Vapor Barrier Materials: Refer to Section 07 26 00, Vapor Retarders, for requirements.

C. Sand Cushion: Sand for sand cushion or blanket under slabs and over vapor barrier shall be a clean and graded, washed sand, all passing a No. 4 U.S. Standard Sieve, and conforming generally to ASTM C33 for fine aggregate. Clean masonry aggregate conforming to ASTM C144 is also acceptable.

PART 3 - EXECUTION

3.01 EXAMINATION

A. The Contractor shall call for an inspection by the Engineer and obtain written approval of the prepared sub grade or sub base before proceeding with placing of the aggregate drainage fill.

B. The sub grade or sub base to receive aggregate drainage fill shall conform to the compaction and elevation tolerances indicated for the material involved and shall be free of standing water and loose or extraneous material.

3.02 INSTALLATION

A. Aggregate Drainage Fill:

1. Pipes, drains, conduits, and any other mechanical or electrical installations shall be in place before any aggregate drainage fill is placed. Backfill at walls to elevation of drainage fill shall be in place and compacted.

2. Aggregate drainage fill under concrete slabs shall be the minimum uniform thickness after compaction of dimensions indicated. Where not indicated, minimum thickness after compaction shall be 4 inches.

3. Aggregate drainage fill shall be compacted with appropriate compaction equipment to form a well-compacted bed. Provide for relative density of 75 percent as determined by ASTM D4253, Dry Method, and ASTM D4254, Method A.

4. Heavy equipment shall not be used within 4 feet of concrete walls. Instead, aggregate drainage fill shall be compacted with suitable light equipment, such as hand-held mechanical tampers.

5. The Contractor shall have the Engineer inspect and approve the finished aggregate drainage fill before proceeding with any subsequent construction over the compacted fill.

B. Vapor Barrier Installation: Lay vapor-barrier membrane over the compacted aggregate drainage fill as specified in Section 07 26 00 - Vapor Retarders.

C. Sand Cushion: A sand cushion shall be placed over the vapor barrier membrane under concrete building slabs on grade. Sand cushion shall be placed in uniform thickness indicated. Where not indicated, thickness shall be 2 inches.
3.03 FIELD QUALITY CONTROL

A. The Contractor shall perform field tests in accordance with ASTM D2922 to determine compliance with specified requirements for density and compaction of the installed aggregate drainage fill.
